

C 85

Stackable chair in 100 % recyclable polypropylene — for indoor and outdoor use

Light. Stackable. Red Dot.

C 85

The C 85 is a modern stackable chair made from 100 % recyclable polypropylene with an ergonomically shaped mono-shell. Weather-resistant, UV-stable and saltwater-resistant — equally suited for hospitality, terraces, hotels and interior spaces. Winner of the Red Dot Design Award 2017.

The C 85 is consistently manufactured from a single material type: shell, structure and base are made entirely from polypropylene — no composite materials, no foreign inserts. This makes it fully recyclable at the end of its service life.

The mono-material shell merges seat and backrest in one ergonomic sweep. The material flexes slightly — providing noticeably greater sitting comfort without additional upholstery. Up to eight chairs can be stacked compactly.

The C 85 is fully weather-resistant: UV-stable, saltwater-resistant and temperature-stable. It is equally suited for outdoor tables, terraces and poolside areas as for dining rooms, lounges and waiting areas.

C 85

Available without armrests (C 85) and with integrated armrests (C 85A) in ten colours of the Nuke Rinasco® collection.

Recognised with the Red Dot Design Award 2017 for outstanding product design.
