

FT 20 HV

Electrically height-adjustable workstation desk

Sit. Stand. Switch. At the touch of a button.

FT 20 HV

The FT 20 HV is an electrically height-adjustable workstation desk for modern offices, schools, administrations and conference rooms. Continuously adjustable from seated to standing height – comfortable, quiet, reliable.

Ergonomically effective and health-promoting: the FT 20 HV enables effortless switching between sitting and standing throughout the working day. A single touch of the integrated controller is all it takes – the columns travel synchronously and quietly to any desired position.

The frame consists of two independent telescoping T-foot columns connected by a horizontal apron rail only at the top under the tabletop. The flat, elongated T-feet lie transverse to the table direction – a slim, stable system with no floor-level crossbar. The columns are two-stage telescoping and provide a height range of 62 to 128 cm.

Tabletops are available in melamine, HPL, veneer, linoleum or ceramic. Frame is powder-coated in white, silver or anthracite. Single workstation or bench configuration (2 face-to-face positions) available.

FT 20 HV — Specifications

- electrically height-adjustable – touch controller
- height range 62–128 cm, synchronous two-column drive
- two telescoping T-foot columns, two-stage
