

T 110

Conference table and workbench with A-frame legs

Distinctive. Flexible. New Work.

T 110

The T 110 is based on the K110 frame system: characteristic A-shaped steel legs in 100×40 mm rectangular tube, angled at 25°, powder-coated in any RAL colour or chrome-plated. Suitable as a conference table, meeting table or double-sided workbench — from small meetings to large coworking floors.

The K110 A-leg is the design signature of the T 110: slender rectangular steel tube legs (100×40 mm), angled outward on both sides, creating a powerful yet light aesthetic. The legs are individually mounted — no cross-brace, no stretcher — allowing maximum legroom and free configuration.

The T 110 is more than a conference table: the system can be extended into a double-sided workbench with acoustic screens, monitor arms, cable management channel (MARSUPIO) and height-adjustable add-on elements. For larger table arrangements, the K111 frame system is available as an extension.

T 110

Table tops in all common shapes (rectangular, boat-shaped, rounded), 25 mm thick, in melamine, HPL, veneer, laminate or linoleum. Edges in solid wood (50 mm) or ABS. Available with castors (soft PU or hard floor) on request.

T 110 — Specifications

- A-leg K110 — rectangular tube 100×40 mm, 25° angle
- no cross-brace — maximum legroom
- single conference table or double-sided workbench
- MARSUPIO cable management channel integrable
